

PAVAN SAI VEJJU

Front-End Developer (React JS) || Work Experience : 5+ Years

Email: pavansaivejju@gmail.com || mobile: 9133953205 || [LinkedIn Profile](#)

Professional Summary

Senior Frontend Engineer with 5+ years of experience building scalable enterprise and responsive web applications in React.js, Next.js, TypeScript, Redux, Redux-Saga, JavaScript, HTML5, and CSS3, and modern frontend architecture. Experienced in Micro Frontends, real-time applications, data visualization, and performance optimization. Skilled at state management, API integrations, and real-time data handling, while ensuring cross-browser compatibility, accessibility, and pixel-perfect UI implementation. Proficient in leveraging AI-assisted development tools such as GitHub Copilot, ChatGPT, and Cursor AI to accelerate development, improve code quality, and streamline debugging. Passionate about building intelligent, user-centric applications with clean architecture and maintainable code.

Technical Skills

Frontend Engineering: React.js, Next.js, TypeScript, JavaScript (ES6+), React Hooks, Redux, Redux toolkit(RTK), Redux Saga, Tailwind CSS, Fluent UI, HTML5, CSS3, SCSS

API & Integration: REST APIs, GraphQL, Microsoft SignalR, JWT Authentication, API Integration, Data Handling

Testing & Quality: Jest, React Testing Library, Stryker Mutation Testing, Unit Testing, Code Quality Practices

Architecture: Micro Frontends, Module Federation, Atomic Design, Component-Based Architecture

Visualization: High charts, Recharts, Interactive Dashboards, Data Visualization

DevOps & Tools: Git, GitHub, Azure DevOps, CI/CD, npm, pnpm

AI-Assisted Development: GitHub Copilot, ChatGPT, Cursor AI, Claude AI, Prompt Engineering, AI-assisted Debugging & Code Optimization

Projects

FC26 Game Stats Platform - Metaplore - (Client: Electronic Arts) - (contract)

Tech: Next.js | React | TypeScript | Tailwind | Recharts | Jest | Stryker

Description: Game Stats Platform is an interactive analytics dashboard for EA FC26 that provides players with insights into matches, wins, losses, rankings, and performance trends. **Duration:** Jan 2026 – present

Roles & Responsibilities

- Developed reusable, responsive UI components and interactive analytics dashboards.
- Built player statistics modules, performance visualizations, and PNG export functionality.
- Integrated REST APIs and contributed to a scalable Micro Frontend architecture.
- Ensured high code quality through Jest unit testing and Stryker mutation testing.
- Collaborated with cross-functional Agile teams to deliver high-quality features.

Symphony- Trade-capture - Amphora Software (contract)

Tech: React.js, React Hooks, Redux, Redux-Saga, TypeScript, HTML, CSS, JavaScript, Tan stack

Duration : October 2025 – December 2025

Description: Symphony Trade Capture is a core module of Amphora's ETRM platform that streamlines energy trade capture, validation, pricing, and position management.

Responsibilities:

- Built dynamic and responsive forms using TanStack Form, with field-level validation and optimized state handling.
- Integrated GraphQL APIs for fetching and submitting trade data, ensuring efficient schema-based communication.
- Performed UI design, code refactoring, and performance improvements, adhering to clean and scalable coding standards.
- Developed reusable common components and implemented unit testing using Jest and React Testing Library to ensure reliability and maintainability.

UGL CMS & PMS - Techwave

Tech Stack: React.js | TypeScript | Redux | Redux toolkit(RTK)| Redux Saga | Fluent UI | Microsoft SignalR | Highcharts | REST APIs | Jest|Azure DevOps **Duration:** January 2022 – October -2025

Description: UGL CMS & PMS are enterprise railway asset monitoring and performance management applications that provide real-time train condition monitoring, asset health insights, operational reporting, and maintenance planning.

Roles & Responsibilities:

- Developed scalable and reusable UI components using React.js, TypeScript, and Fluent UI.
- Built interactive dashboards and data visualizations using Highcharts for asset monitoring and performance analysis.
- Implemented real-time data updates using Microsoft SignalR and integrated REST APIs for backend communication.
- Managed complex application state using Redux and Redux Saga with optimized frontend architecture.
- Improved application performance through reusable components, code optimization, and responsive design practices.
- Supported CI/CD deployments using Azure DevOps and collaborated with Agile teams for feature delivery

Aman Travels

Tech Stack: React.js | Redux | Ant Design | GraphQL | HTML | CSS | Jest|JavaScript

Duration: April 2021 – December 2021

Description: Multilingual travel management application providing booking services for hotels, transportation, apartments, and railway services through a responsive web platform.

Roles & Responsibilities:

- Developed reusable React components and responsive UI screens using Ant Design.
- Integrated GraphQL APIs and Redux for efficient data management.
- Improved frontend performance using code optimization and modern React practices.
