

# PAVAN SAI VEJJU

Front-End Developer (React JS) | Work Experience: **5.6 Years**

Email: [pavansaivejju@gmail.com](mailto:pavansaivejju@gmail.com) | mobile: **9133953205** | [LinkedIn Profile](#) | [Portfolio](#)

## Professional Summary

Frontend Developer with **5.6** years of experience building and scaling high-performance web applications using **React.js, TypeScript, Next.js (SSR/SSG), and Micro-frontends**. Strong background in frontend system design, integrating REST APIs, real-time data handling, data visualization, and advanced state management. Proven expertise in application performance optimization, ensuring cross-browser compatibility, and delivering maintainable code in Agile environments.

## Technical Skills

- **Frontend Engineering:** React.js, Next.js (SSR/SSG), TypeScript, JavaScript (ES6+), React Hooks, HTML5, CSS3, SCSS, Tailwind CSS, Fluent UI, Bootstrap
- **Architecture & State Management:** Micro-frontends, Module Federation, Atomic Design, Component-Based Architecture, Redux, Redux Toolkit (RTK), Redux-Saga, Context API
- **APIs & Integration:** REST APIs, GraphQL, Microsoft SignalR, JWT Authentication, Contentful SDK, API Integration
- **Data Visualization:** Highcharts, Recharts, Interactive Dashboards
- **Testing & Quality:** Jest, React Testing Library, Stryker (Mutation Testing), Unit Testing
- **DevOps & Tools:** Git, GitHub, Azure DevOps, CI/CD, npm, pnpm
- **AI-Assisted Development:** GitHub Copilot, ChatGPT, Cursor AI, Claude AI, Prompt Engineering, AI-assisted Debugging & Optimization

## Professional Experience

**Metaplore (Electronic Arts)** | Front-End Developer | Jan 2026 – Present

*Project: Loyalty Contentful Hub (SDK App)* | Jul 2026 – Present

*Description: A custom Contentful SDK application for EA's loyalty platform enabling business teams to configure and manage content models for reward programs.*

- Developed custom UI extensions and interactive forms using the Contentful SDK, Next.js, and TypeScript, enabling business teams to manage loyalty reward programs seamlessly.
- Created configuration modules for landing and reward pages, streamlining content type schema creation and reducing dependency on engineering teams.
- Implemented role-based access control (RBAC) through tags to secure user permissions and ensure clean, structured content delivery across downstream applications.

*Project: EA MVP+ Membership Platform* | Mar 2026 – Jul 2026

*Description: Scalable Next.js web application for EA's MVP+ platform handling cross-franchise digital rewards, early access incentives, and bundle subscriptions.*

- Architected a dynamic nested routing layout with Next.js to programmatically resolve parent, child, and optional sub-program hierarchies with zero hardcoded paths.
- Engineered optimized global and local state management with REST API synchronization to handle asynchronous reward validation and user eligibility checks.
- Implemented Micro-frontend architecture via Module Federation and deep performance optimization (component-level memoization, lazy loading) to maintain sub-second render times under high concurrency.
- Enforced high code quality and application stability by writing comprehensive unit and integration tests using Jest and React Testing Library

*Project: Game Stats Platform – FC26 | Jan 2026 – Mar 2026*

*Description: A player statistics application for EA's FC26 tracking gameplay performance, win ratios, and historical metrics via interactive graphical charts.*

- Implemented graphical data visualization using Recharts to track win ratios, match statistics, and historical gameplay metrics.
- Built shareable snapshot functionality enabling users to download PNG images of their statistics without directly rendering the image on the UI.
- Wrote unit tests using Jest and performed mutation testing with Stryker, achieving 100% test coverage and a perfect mutation score across implemented modules.

**Amphora Software** | Front-End Developer | Oct 2025 – Dec 2025

*Project: Symphony Trade-Capture*

*Description: Amphora ETRM platform module for real-time energy commodity trade management.*

- Built dynamic, responsive forms using TanStack Form with field-level validation and optimized state handling for real-time energy commodity trades.
- Integrated GraphQL APIs for efficient schema-based communication to fetch and submit trade data.
- Developed reusable components and enforced reliability through unit testing with Jest and React Testing Library.

**Techwave** | Front-End Developer | Apr 2021 – Oct 2025

*Project: UGL CMS (Condition Monitex System) | Oct 2023 – Oct 2025*

*Description: An Australian software system designed to assist Help Desk staff in monitoring live train asset conditions and identifying maintenance needs.*

- Built interactive dashboards and high-volume data visualizations (heatmaps, spline area graphs, bar charts) using Highcharts and React.js for real-time train condition monitoring.
- Enabled real-time updates using Microsoft SignalR to improve live tracking and align team members on asset conditions.
- Applied Atomic Design principles to build a structured, reusable Fluent UI component library and managed complex application state using Redux and Redux-Saga.

*Project: UGL PMS | Jan 2022 – Sep 2023*

*Description: A cloud-hosted web application built to streamline asset performance and service monitoring with SAP integration.*

- Spearheaded key application features including the Maintenance Schedule module, SAP integration synchronization, and automated report exports (PDF, CSV, PNG).
- Configured CI/CD automation and deployments using Azure DevOps to enhance release cycle efficiency across cloud-hosted environments.

*Project: Aman Travels | Apr 2021 – Dec 2021*

*Description: Multilingual application for global travel booking and services*

- Developed scalable UI components using React and Ant Design for a multilingual travel management application.
- Optimized frontend performance utilizing code-splitting and caching techniques, and integrated GraphQL APIs for dynamic data fetching.

**Education :** Bachelor of Technology (B.Tech) | Jawaharlal Nehru Technological University, Kakinada | 2019
